

V300 Outswing or Inswing Door with Low Profile Sill Installation Guide

-Scan here for a digital version-

Part # IG-115 - V.1.0 1/29/2026

Pages 5 to 6 -- Rough Opening Instructions
Pages 7 to 8 -- Out-Swing Door Frame Installation Instructions
Pages 9 to 15 -- In-Swing Door Frame Installation Instructions
Pages 16 to 17 -- Door Installation and Hinge Adjustment Instructions

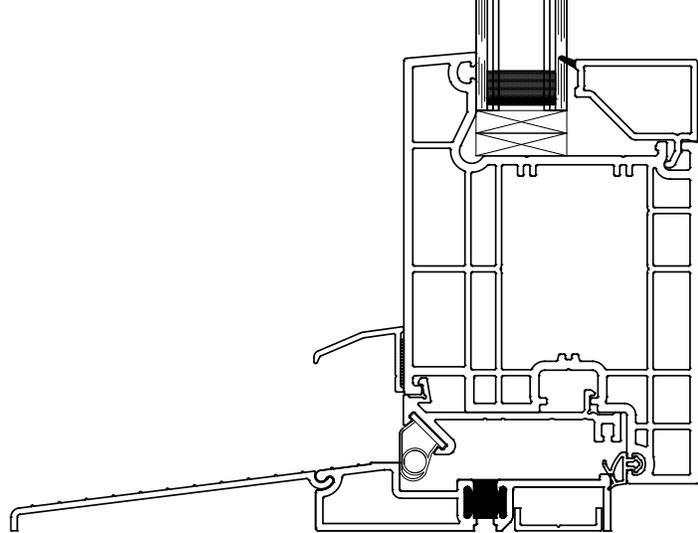

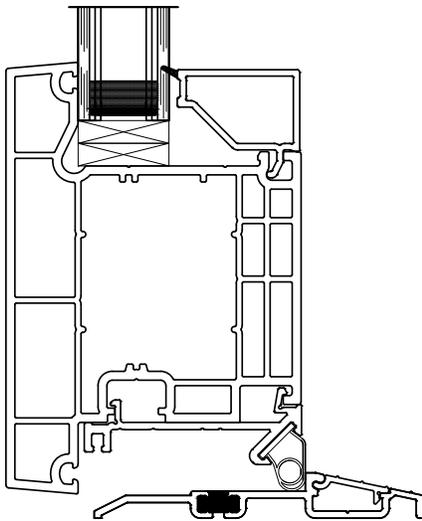

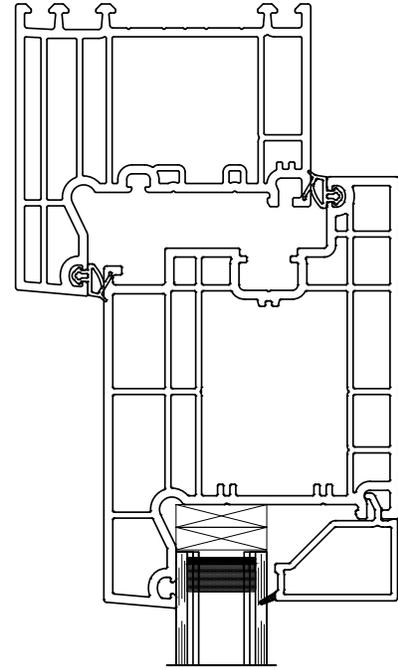

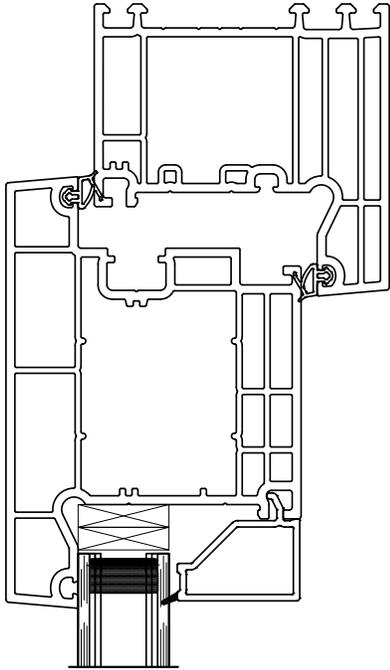

If this set of instructions does not match your installation method or the wall conditions of the job site, please check our website listed below for other options, or call Quaker Customer Service for additional information.

Quaker Window Products
504 Highway 63 S
Freeburg, MO 65035

Fax: 573-469-4151
www.quakerwindows.com

Note:

While the details within these instructions are based on the Out-Swing Door, the installation and sealing methods also apply to the In-Swing Door. When required, In-Swing Door details will be shown.

Out-Swing Door
w/o Transom

In-Swing Door
w/o Transom

Tools Required by Installer

Safety Glasses

Drill/Driver

Level

Caulk Gun

Utility Knife

Metal Cutting Saw

Tape Measure

Staple Gun

Rubber Mallet

J-Roller

Materials Required by Installer

Foam Backer Rod

Plastic Shims

Self-Adhering Flashing Tape

Perimeter Fasteners

Sealant

Minimally Expanding Foam

Denatured Rubbing Alcohol

-Carefully read these instructions before starting any installation-

Failure to install and maintain QUAKER® products according to these instructions may void any product warranty. However, these are generic instructions that cover common situations and applications, aspects of which may not be appropriate for all installations due to building design, site conditions, construction materials, or installation methods used. Refer to shop drawings, if applicable, for additional notes and details. Please consult Quaker for specific applications not covered in these installation instructions, or visit our website at www.quakerwindows.com, or call 800-347-0438 for additional information.

Tools

- Follow manufacturer's instructions and safely operate tools, ladders, or scaffolding. Always wear safety glasses. Failure to do so could result in injury, product, or property damage.

Handling

- Do not store QUAKER products outside or in an unprotected, high moisture, or high heat environment prior to installation. Doing so could result in product damage.
- Do not carry, transport, or store QUAKER products in a flat (horizontal) position. Doing so could result in product damage or injury.
- Window and door units should be kept or stored in an upright (vertical) position, with support across the sill to avoid bowing. Do not lay any units in a flat position!

Glass

- If glass gets broken, please exercise caution, as glass fragments can cause lacerations or other injuries. In many areas, local building codes require safety glass to be used in certain applications. All QUAKER products are available with safety glass if they are ordered that way.

Fastening

- Metal fasteners and components could corrode when used in contact with preservative-treated lumber. Use approved and appropriate fasteners and components to fasten QUAKER products in this application. Failure to do so could result in a product performance failure, injury, or property damage.
- Quaker does not provide anchorage or fastener calculations.
- Quaker is not responsible for determining structural adequacy of the anchorage and fasteners used to install QUAKER products, or the openings into which they are installed.

Installation

- Report any damage to dealer immediately. Do not install product if damaged. Quaker is not responsible for addressing products that are damaged after delivery, or product that is installed in a damaged condition.
- Always support window or door products in an opening until fully fastened. Failure to do so could result in the product falling out of an opening and causing injury, product, or property damage.
- Nailing flanges and drip caps (integral or applied) do not take the place of window flashing. All QUAKER products must be properly flashed and sealed with material compatible sealant for protection against water and air infiltration around the entire exterior perimeter. Failure to do so could result in a product installation failure and property damage.
- Windows and doors must be properly shimmed. To properly shim a QUAKER product, follow relevant installation guidelines, and never set a window directly on a sill plate. Failure to shim properly is an installation failure that could result in product performance failure or property damage.
- Construction directly above an opening must be engineered and designed not to transfer loads directly to any windows or doors. If live or dead loads are transferred to a QUAKER product, this may affect functionality and result in glass failure or otherwise damage frame joinery, perimeter seals, or other aspects of the product. Proper construction of the rough opening must take place prior to the installation of the QUAKER product.
- Please confirm that any necessary vertical deflection of the head condition is consistent with the selected QUAKER product. Most QUAKER products are not designed to allow any deflection at the head condition. Shop drawings may indicate the maximum allowable vertical deflection at the head condition of a QUAKER product. If vertical deflection is a concern but shop drawings are not provided, please contact Quaker for assistance.
- Windows and doors have small parts that, if swallowed, could pose a choking hazard to young children. Please dispose of unused, loose, or easily removed small parts. Failure to do so could result in injury or death.
- Do not drill through or into the sill or frame of any QUAKER products, whether to install alarm wires or for any other reason.
- During installation and positioning of any window or door products with an aluminum frame, make sure to align the thermal break of the product, with the insulation plane or air barrier of the building itself, in order to maintain continuity and integrity of the thermal envelope, and prevent thermal bridging that leads to excessive thermal transfer and/or condensation. In other words, the thermal break of the product must be recessed from the exterior plane of the wall opening, remain fully embedded within the wall opening, and not be exposed directly to exterior elements.

Sealing

- Follow supplier instructions for proper application of minimally expanding foam, sealant, water resistant barrier or liquid barrier, and flashing products and systems to ensure safety, proper material application, compatibility, and to understand the need for periodic maintenance for continued weather resistance of their products. Failure to do so could result in product performance failure or property damage.
- Minimally expanding foam insulation must be compliant with AAMA 812.
- If silicone is selected as an appropriate sealant, Quaker recommends using 100% neutral cure silicone sealant, that is ASTM C920 compliant. Always clean and prepare the surfaces where the sealant will be applied per the manufacturer's recommendation. Once applied, properly tool the sealant in place. Failure to do so could result in product performance failure or property damage.
- Flashing tape must meet ASTM-D779 performance requirements.
- Maintain and properly seal a minimum of 1/4" gap (or whatever is specified within these installation instructions or shop drawings) around the perimeter of the window or door frame and the exterior finish materials. Failure to do so could result in product installation failure or property damage.

Joining

- Do not join any Quaker product to another product that is not designed for joining. Joined products must be individually supported in the opening. Failure to do so could affect operation and product performance and could result in a product installation failure or property damage.

Cleaning

- Do not use any cleaning agent other than a mild, non-abrasive window washing solution or glass cleaner applied in accordance with any product labeling instructions and Quaker's care and maintenance instructions. The use of harsh chemicals (such as brickwash, bleach, alcohol, hydrochloric acid, or muriatic acid) for cleaning or other purposes may damage QUAKER products, glass, fasteners, hardware, seals, sealant, or metal flashing. Please protect these products by following the cleaning product's instructions for its proper use.
- Do not use a razor blade to clean a glass surface, as damage to the glass may result.

IMPORTANT

- Buildings constructed prior to 1978 may contain lead paint which could be disturbed during window or door replacement. For more information on proper management of lead paint, go to: www.epa.gov/lead
- Care must be taken to properly recycle or dispose of used or old materials. Any recyclable material should be separated from non-recyclable or hazardous materials. Please consult with local or state authorities regarding proper disposal of non-recyclable or hazardous materials.
- Inspect all window and door units for any damage or defects prior to installation. Contact the nearest QUAKER distributor if there are any problems or issues.
- **WARNING:** This product can expose you to chemicals, including titanium dioxide or methanol, which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov
- **WARNING:** Drilling, sawing, sanding, or machining wood products can expose you to wood dust, a substance known to the State of California to cause cancer. Avoid inhaling wood dust or use a dust mask or other safeguards for your personal protection. For more information go to www.P65Warnings.ca.gov
- When installation is completed, operable window and door products, and related hardware or equipment, may require some adjustments. Confirming operability and making minor adjustments are within the scope of the installation services performed by others.
- **WARNING - OVERHANG NEEDED:** It is recommended that doors (swing and sliding) with ADA or Low-Profile Sills be installed with an overhang depth equal in length to the height of the door. If you choose to use an overhang depth less than the height of the door, you must confirm that it is appropriate based on code requirements and the expected local wind and rain conditions.

These instructions are based on an Out-Swing and/or In-Swing Doors. (see shop drawings if applicable).

NOTE:

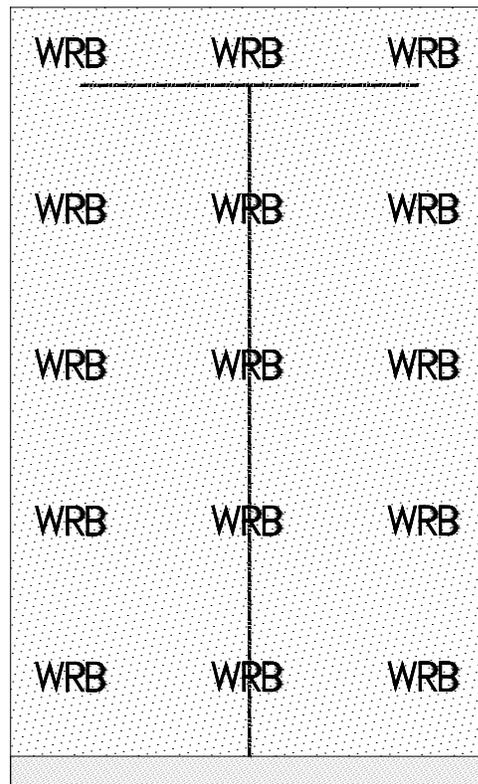

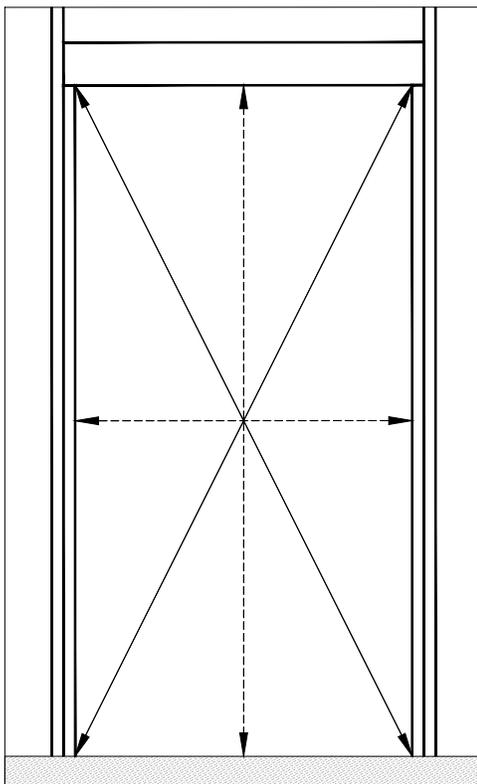

For easier installation, remove the door from the frame. Open the door 90° and lift it off the hinges. Place the door in a safe area where it can not be damaged. See page 29 for hinge adjustment instructions.

RO1

From the interior, measure and verify the size of the rough opening. The rough opening should be a minimum 3/4" wider and 1/2" taller than the Total Unit size, unless otherwise specified on the shop drawings. Verify the rough opening is flat, plumb, level, and square. Take diagonal measurements to check for square.

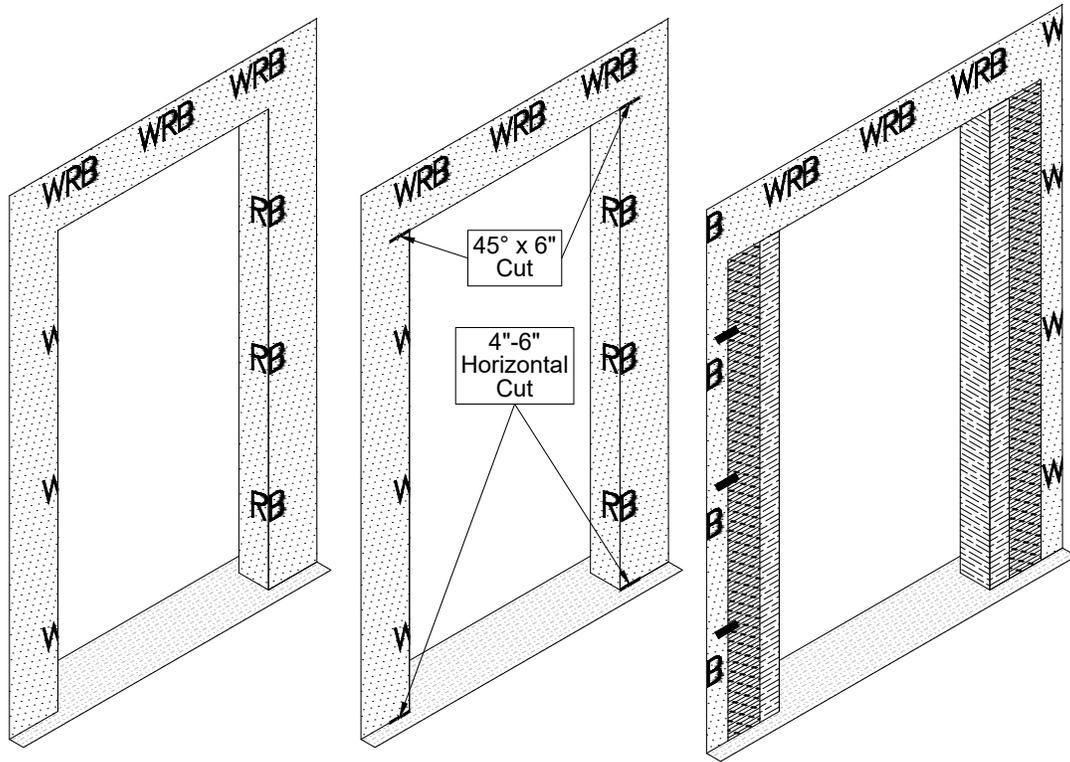

The sill structure beneath the unit must be level for proper unit operation.

Go to the exterior and cut the Weather-Resistant Barrier (WRB) in an 'I' pattern.

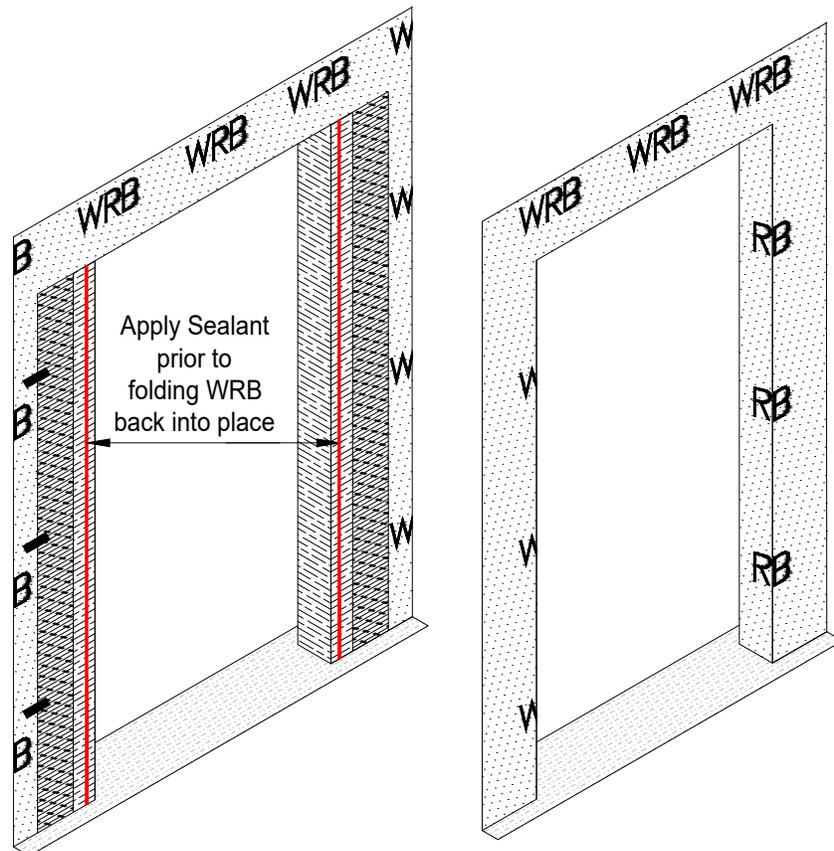

RO2

Fold the WRB sides towards the interior and trim as needed. Do not staple in place. Make 4"-6" horizontal cuts in the WRB at the head and sill jambs. Fold back WRB at the cut lines, and tape into place.

RO3

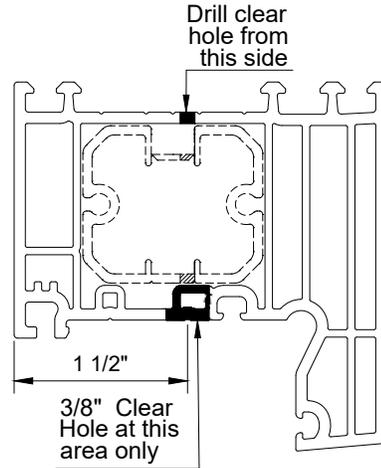

Apply sealant at the jambs where shown. Fold the WRB jamb flaps back into place, over the sill flashing, and fix into place. Leave head flap in place.

Out-Swing Door Frame Installation

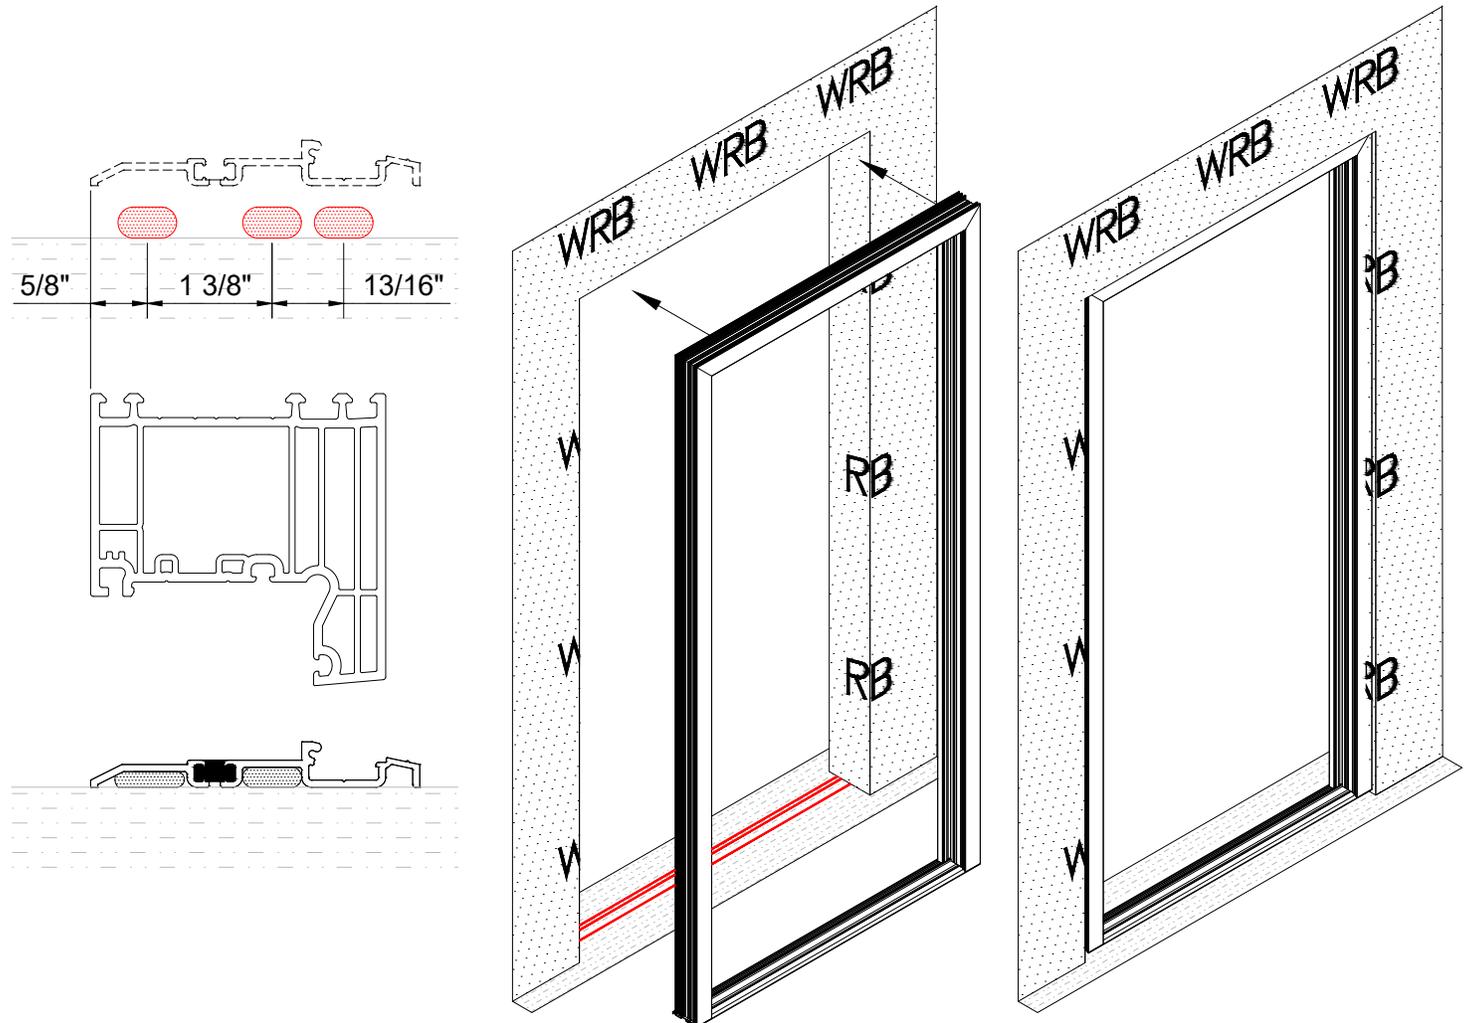

OSFI1

At the Door Frame, the perimeter fastener locations will need to be located per the Shop Drawings or the anchorage calculations. Drill a 3/8" diameter clear hole where required, then drill the appropriate clear hole from 'exterior' side as noted below.

OSFI2

Before inserting the Door Frame assembly into the opening, determine where the face of the frame will be located in the opening. Then run three (3) beads of silicone sealant where shown below. The sealant should run jamb-to-jamb. Install the frame assembly by lifting it into the rough opening from the exterior side. Add plastic shims as needed at the perimeter fastener locations. Make sure the frame is level and square before installing the perimeter fasteners.

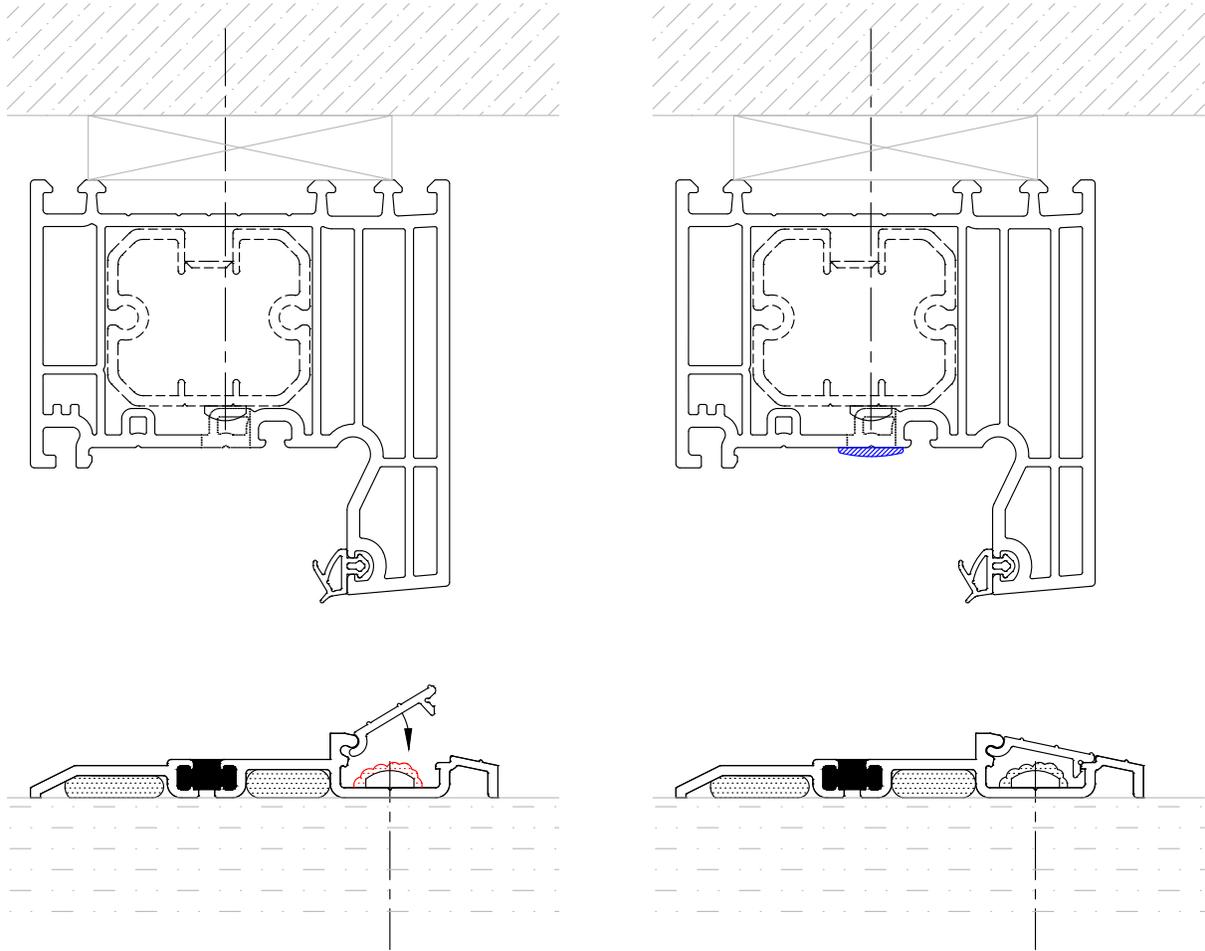

OSFI3

Match drill the the perimeter fastener holes into the building structure. Fill these holes with silicone sealant.

Attach the Door Frame. Do not over-tighten the fasteners.

Seal over fastener heads at the sill and tool as needed. Install threshold cover.

When all fasteners are in place, install the provided Hole Plugs in the head and jambs.

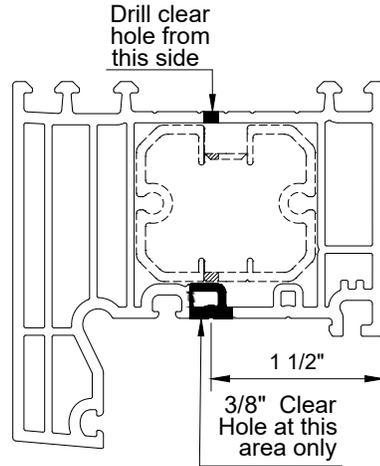

This Completes the Out-Swing Door Frame Instruction Instructions

In-Swing Door Frame Installation

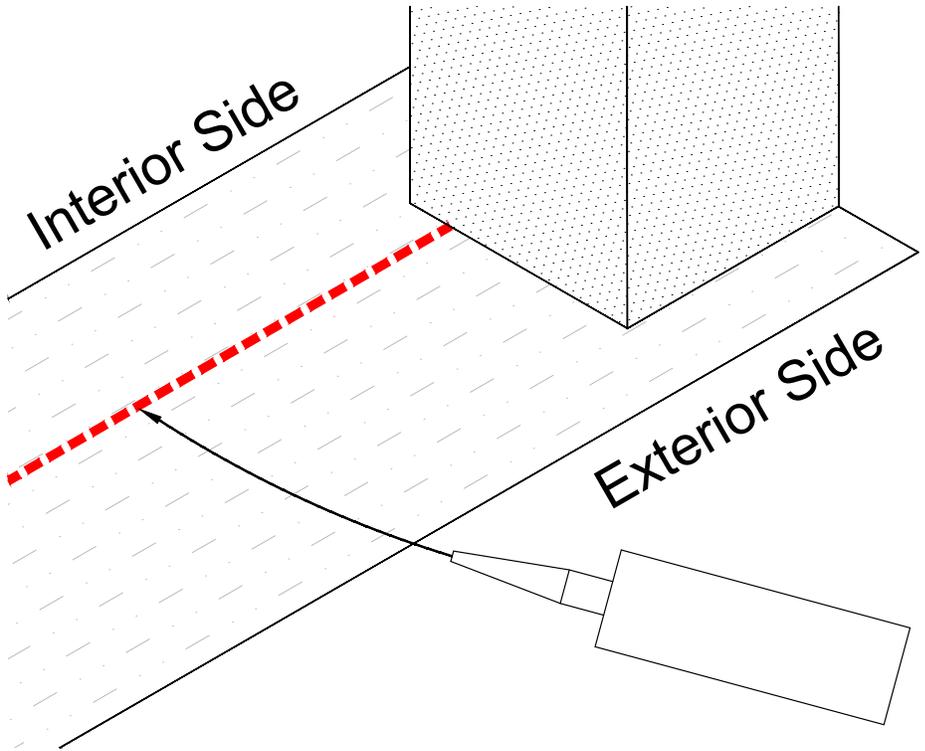

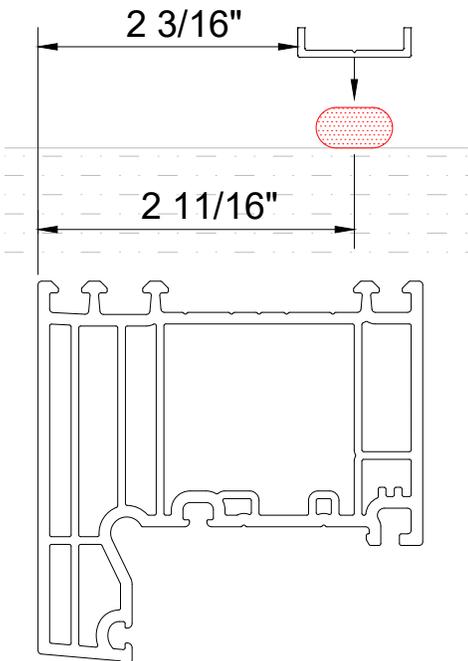

ISFI1

At the Door Frame, the perimeter fastener locations will need to be located per the Shop Drawings or the anchorage calculations. Drill a 3/8" diameter clear hole where required, then drill the appropriate clear hole from 'exterior' side as noted below.

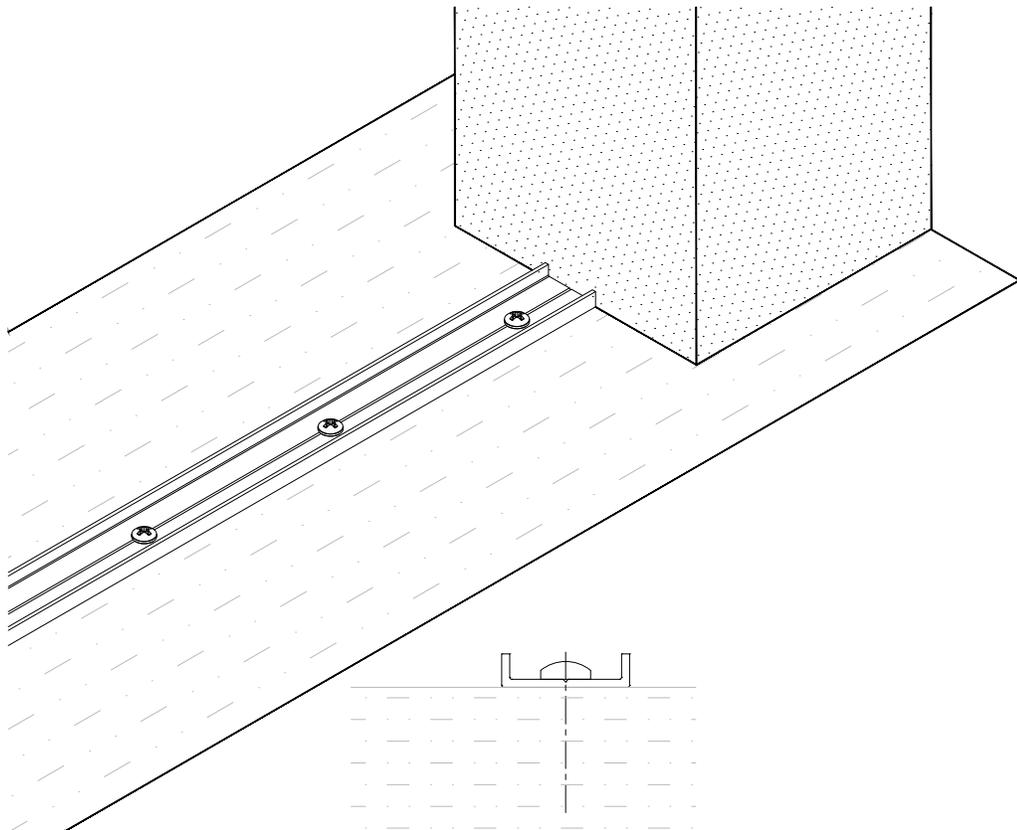

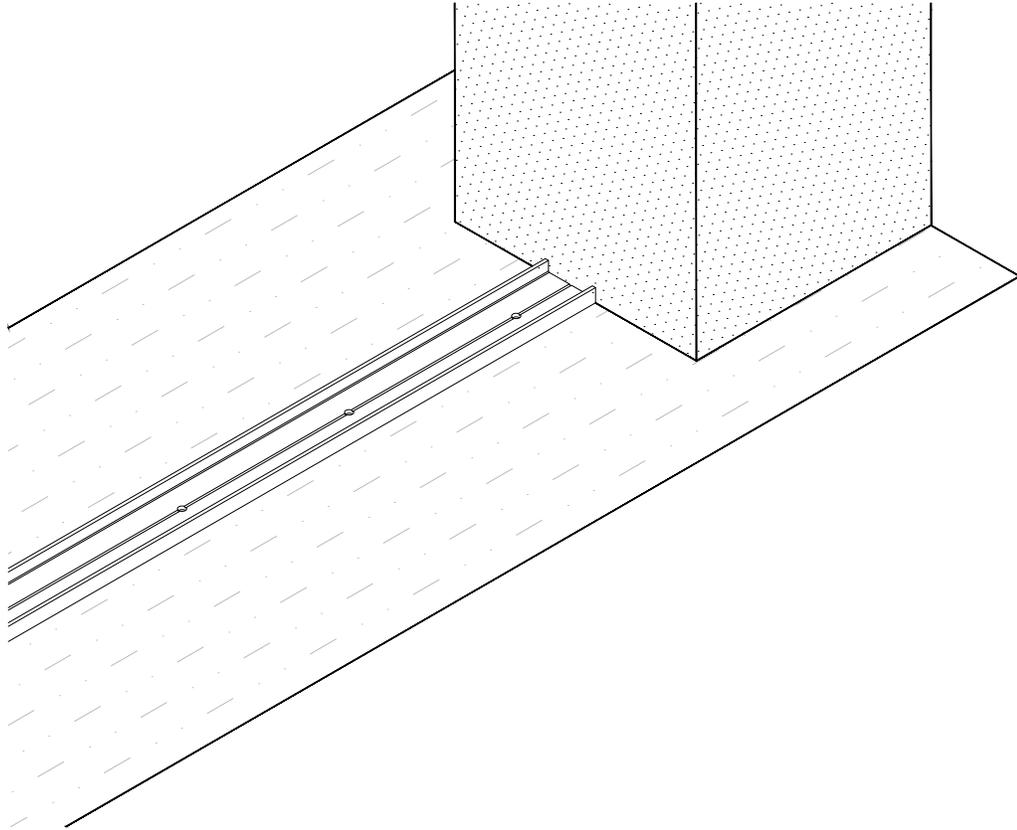

ISFI2

Before inserting the Door Frame assembly into the opening, determine where the face of the frame will be located in the opening. Then run a continuous 3/8" bead of silicone sealant where shown below. The sealant should run jamb-to-jamb.

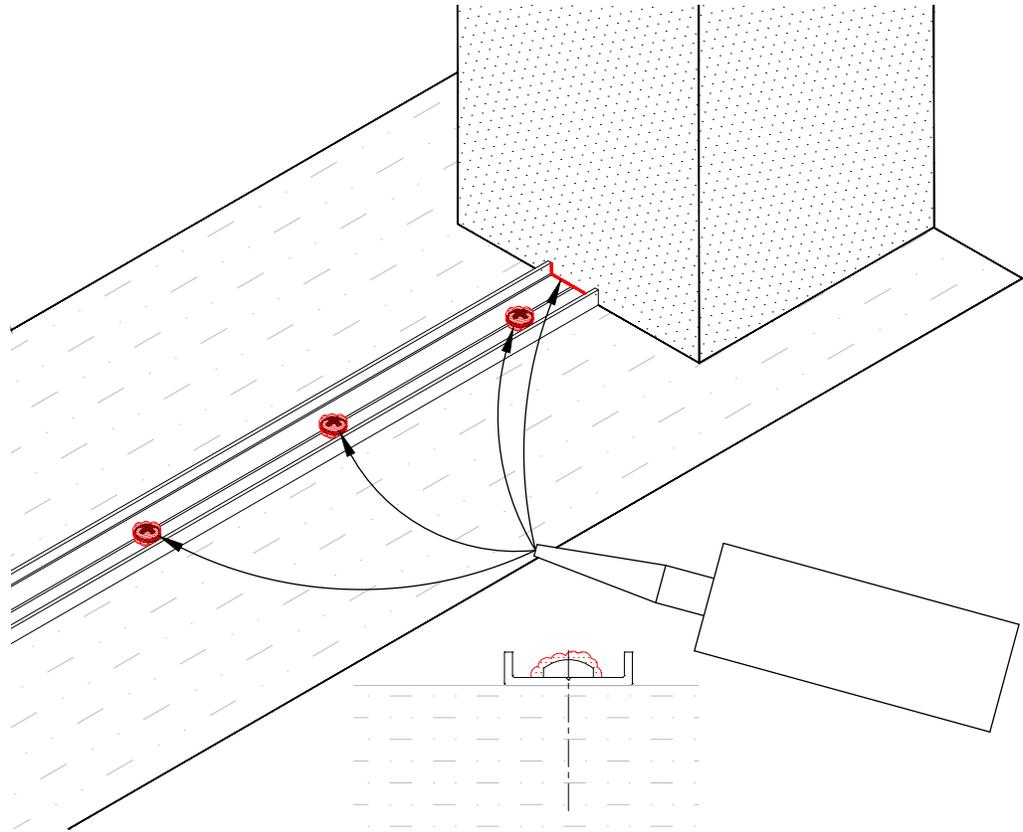

ISFI3

Set the Sill Pan in place to ensure proper alignment and to verify if level.
Match drill the perimeter fastener holes into the building structure.
Fill these holes with silicone sealant and fasten the Sill Pan in place.

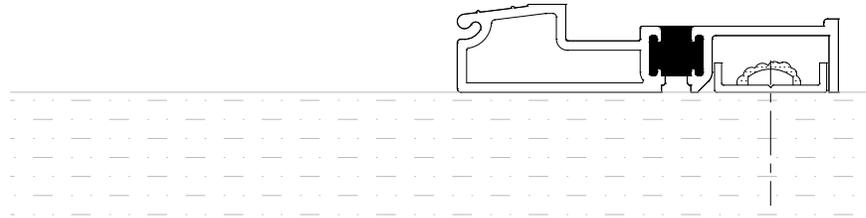

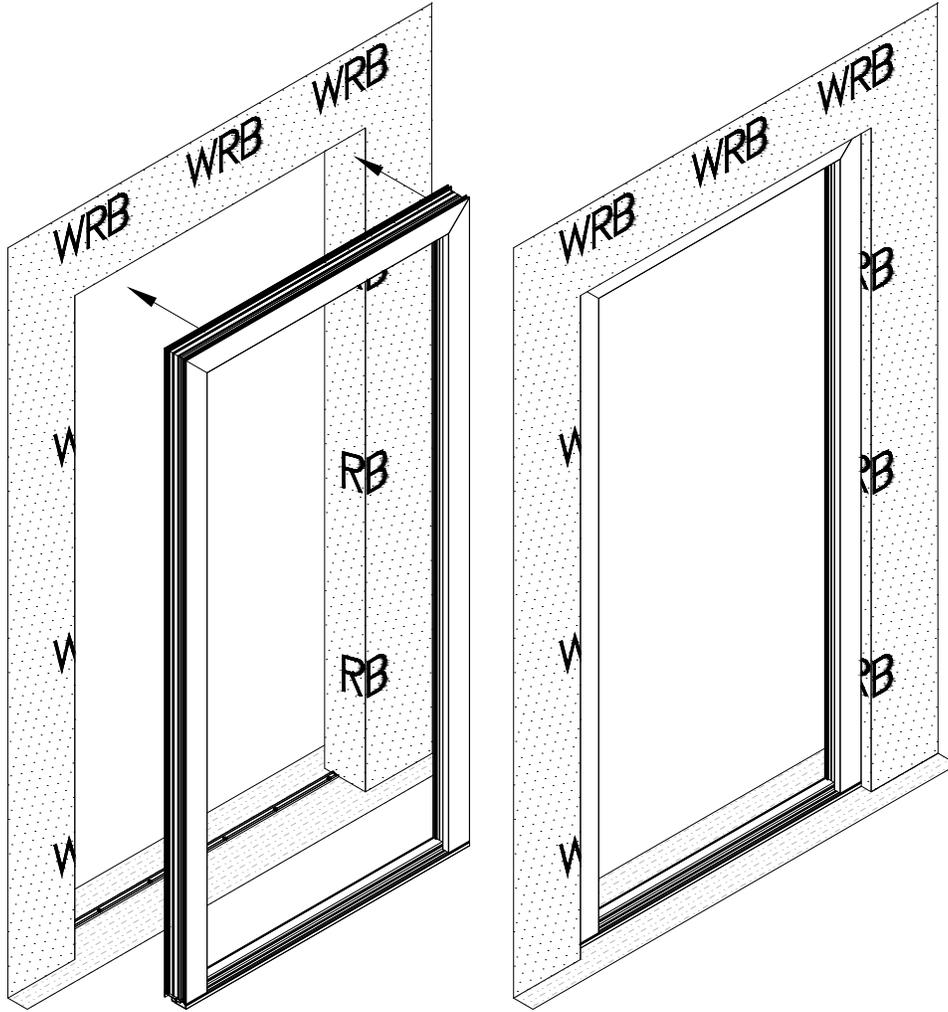

ISFI4

After installing the perimeter fasteners, apply silicone over the screw heads and tool as needed. With the Sill Pan in place, apply silicone sealant along the edge of the Sill Pan and tool as needed.

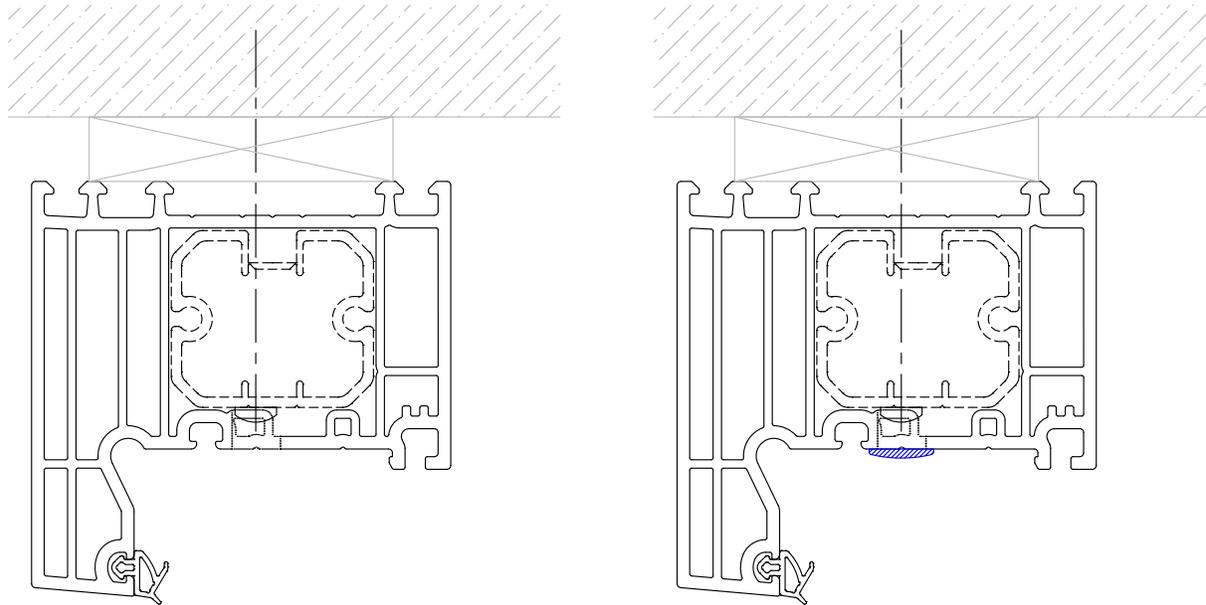

ISFI5

Install the frame assembly by lifting it into the rough opening from the exterior side and placing it over the Sill Pan. Add plastic shims as needed at the perimeter fastener locations. Make sure the frame is level and square before installing the perimeter fasteners.

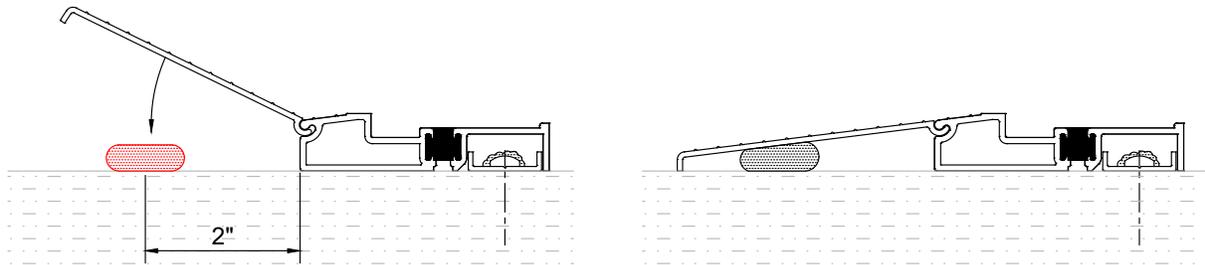

ISFI6

Match drill the the perimeter fastener holes into the building structure. Fill these holes with silicone sealant.
Attach the Door Frame. Do not over-tighten the fasteners.
When all fasteners are in place, install the provided Hole Plugs in the head and jambs.

ISFI7

Apply a generous amount of sealant at the sill where shown.
Install threshold extension (fasten down if necessary).

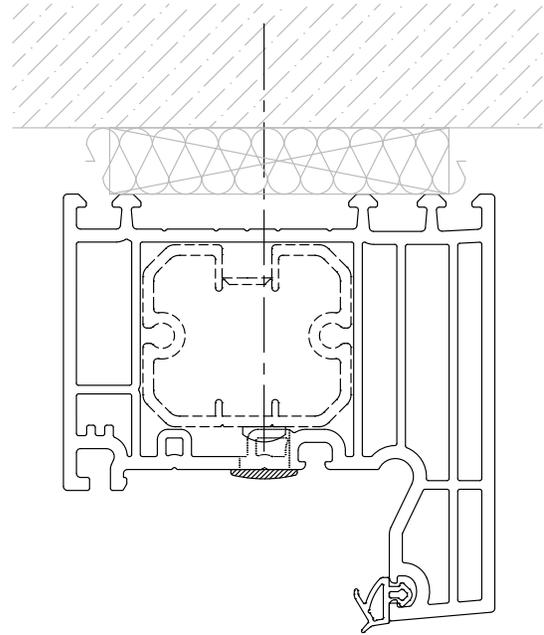

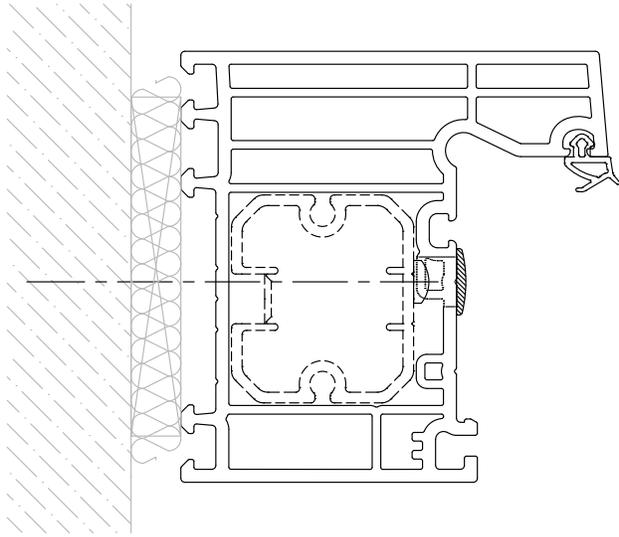

This Completes the In-Swing Door Frame Instruction Instructions

Sealing Instructions

SI1

Insert insulation into the gap at the head and jambs as shown below.

SI2

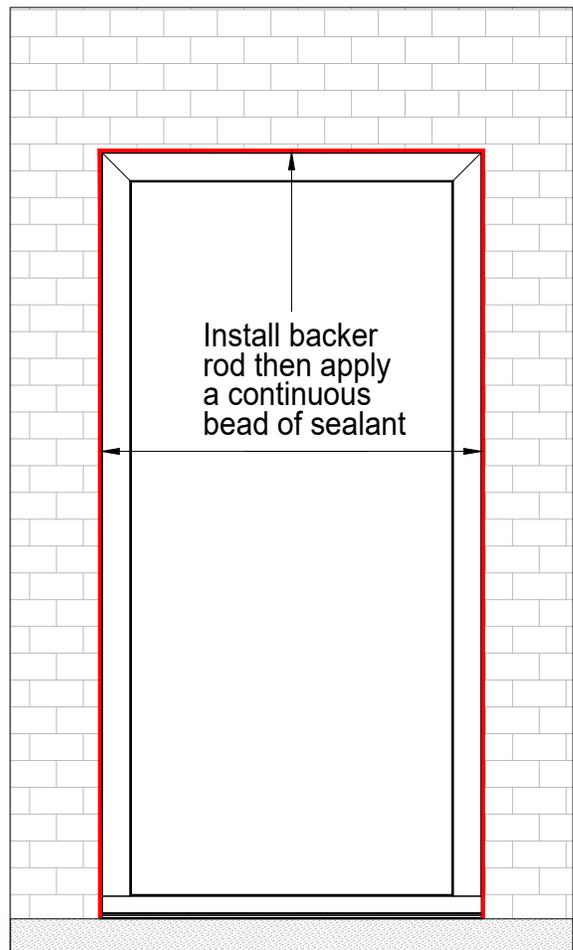

Refer to the Shop Drawings if additional flashing or other material is required. After exterior building construction is completed, install back rod, then apply a continuous bead of sealant around entire perimeter of window frame and tool in place.

Note:

Installer to verify that Sealant being used is compatible with Quaker window frame and the surrounding building construction materials.

Note:

Please inform the exterior facade installer that they must maintain a minimum 1/4" gap between the facade material and the Window Unit, and that the facade material should never come in contact with the Window Unit.

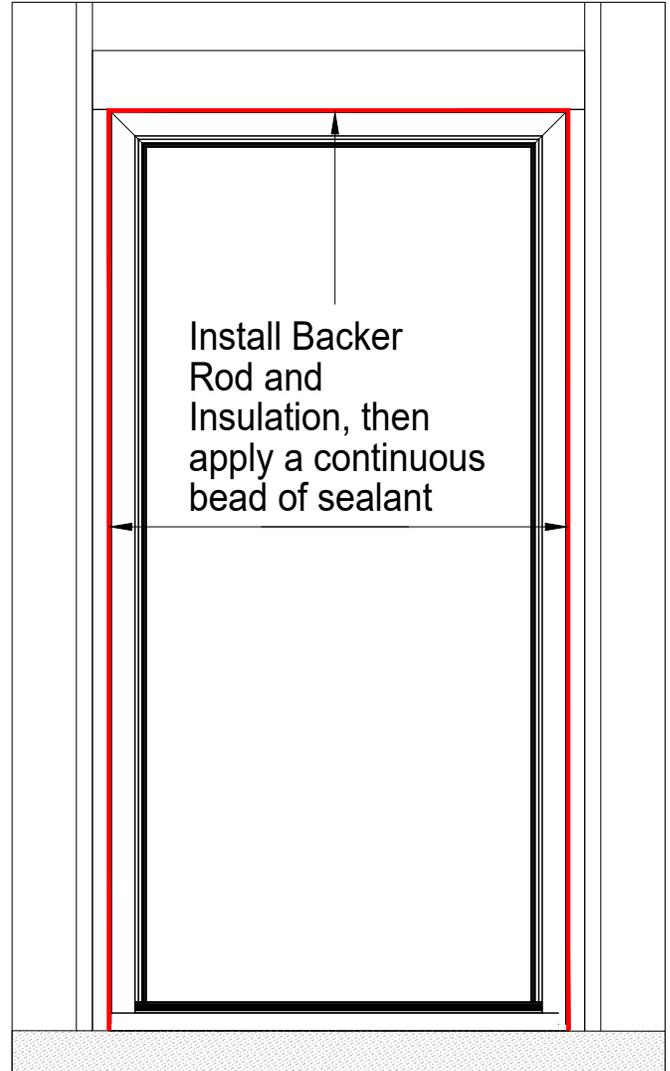

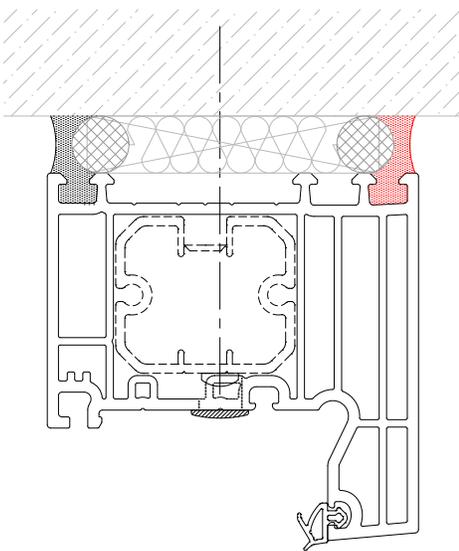

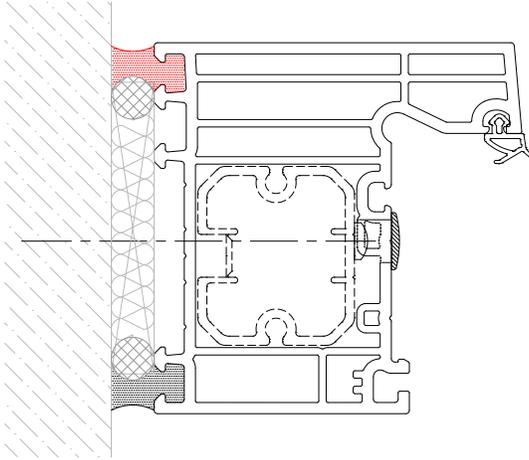

SI3

At the interior, insert a continuous backer rod and seal the window and T-Mullion to the building structure as shown below. Tool as needed.

Note:

Installer to verify that Sealant being used is compatible with Quaker window frame and the surrounding building construction materials.

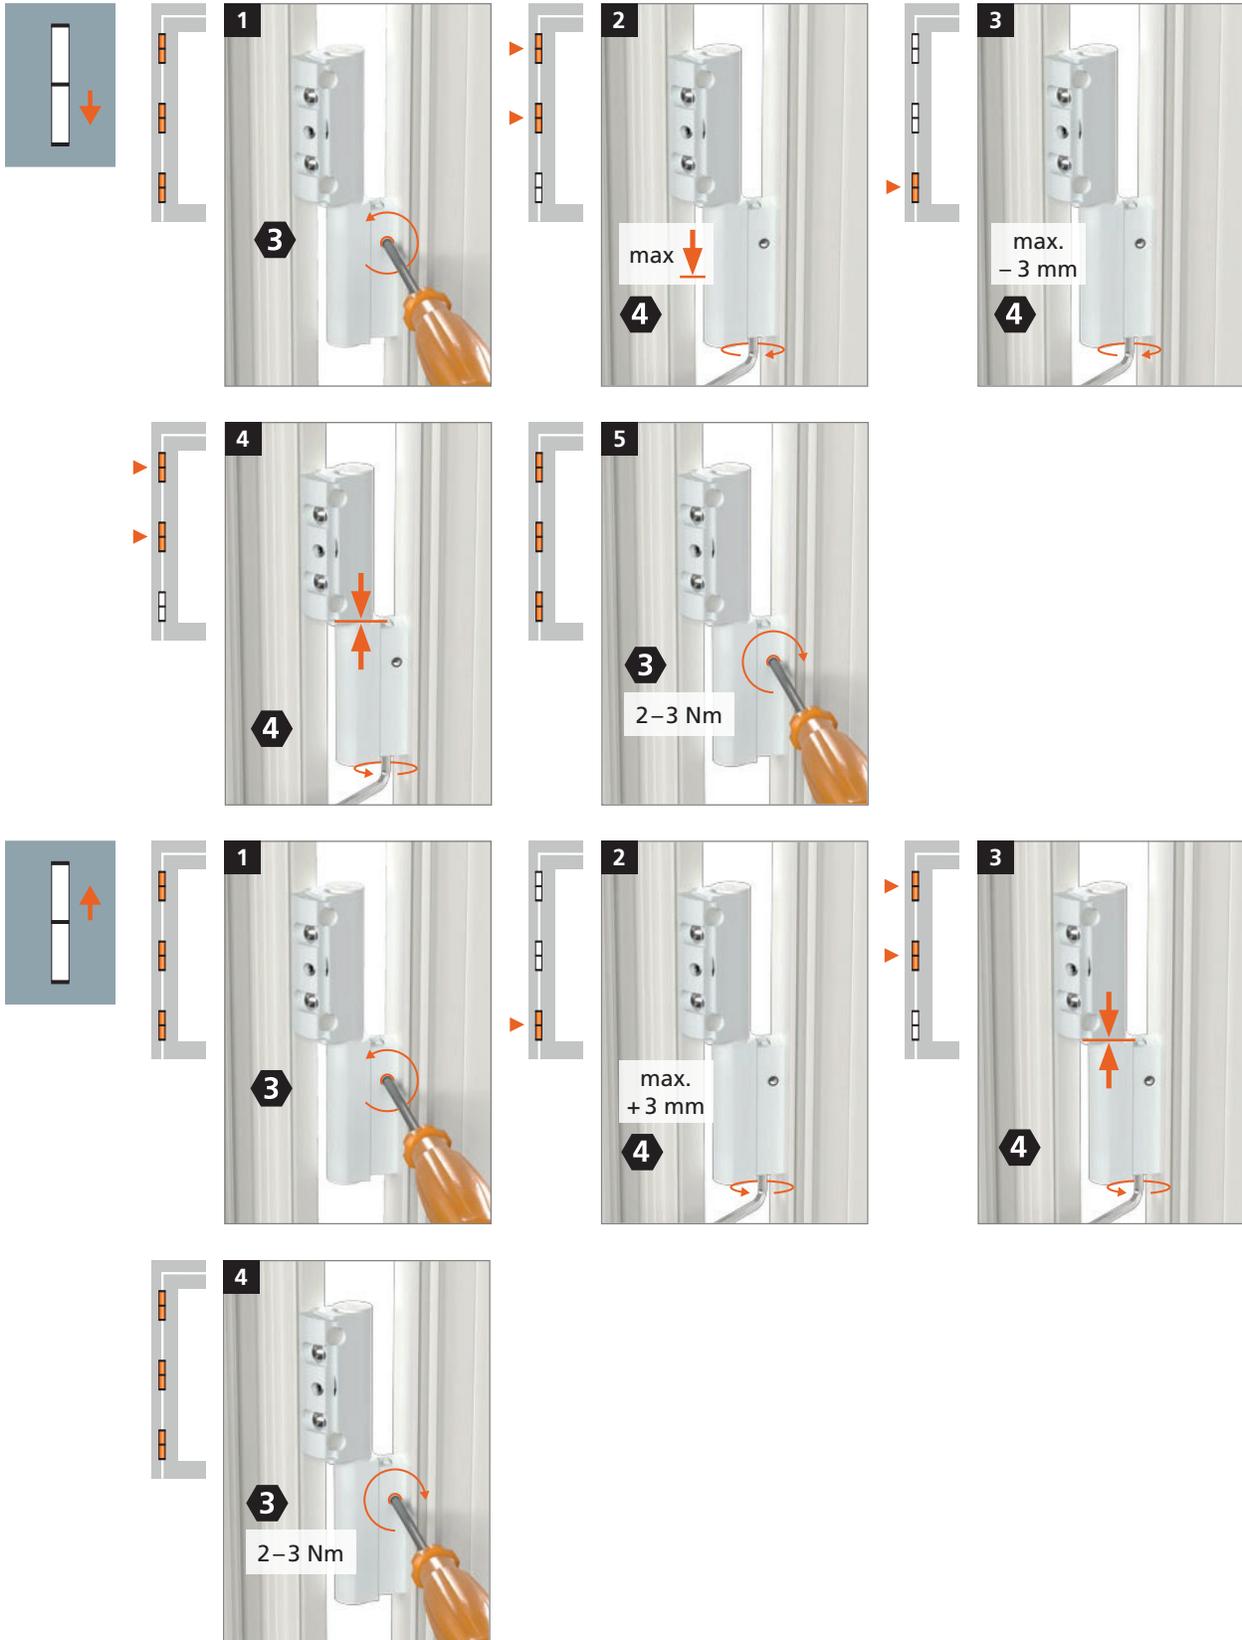

This Completes the Sealing Instructions

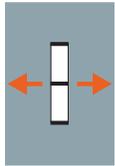

Door Installation and Hinge Adjustment Instructions

At this time, lift the door onto the hinges. Adjust the door per the instructions below and on page 29. Verify locking is still aligned and works properly.

Höhenverstellung · Réglage en hauteur · Adjusting the height

Horizontalverstellung · Réglage horizontal · Horizontal adjustment

Dichtungsandruckverstellung · Réglage de la compression du joint d'étanchéité · Adjusting the sealing pressure
